COMPUTER, AND SOFTWARE ENGINEERING

ELECTENG 332

Notes on Control Systems

Dear god help me, not another one…

by

Faculty of Engineering

University of Auckland

Table of contents

1 Basics of Signals and Systems **4**

Learning Outcomes 5

1 **6**

Index

This document serves as the index for the **ELECTENG 332 Notes**. Below is a simple list of contents organized by topics and chapters.

Basics of Signals and Systems

1. Importance of Exponential Functions
2. Concept of Engineering Infinity
3. Concept of Complex Frequency
4. What are Signals?
    - Introduction
    - Energy & Power Signals
    - Examples: Unit Step Function, Exponential Function, Ramp Function
5. What are Systems?
    - Introduction
    - System as an Operator
    - Classification of Systems
    - Linear and Nonlinear Systems
    - Time-invariant and Time-varying Systems

Mathematical Modelling of Dynamic Systems

1. Introduction to Modeling
2. Definition of a Model
3. Basic Concepts: Poles, Zeros, and System Order
4. Differential Equation Models of Simple Dynamical Systems
5. Modelling of Electrical Systems
6. Modelling of Mechanical Systems

Block Diagrams & Feedback Systems Overview

1. Basics of Block Diagrams
2. Feedback Systems

Time Domain Analysis of Linear Systems

1. Introduction to Time Domain Analysis
2. Methods and Examples

Stability Analysis of Linear Systems

1. Introduction to Stability Analysis
2. Key Concepts and Examples

Note: This index is automatically generated based on the content structure and serves as a navigation aid. It's also shoehorned in here because otherwise it doesn't render.

Module 1:

Basics of Signals and Systems

Learning Outcomes

- Uniqueness of the Exponential Signal
- Concept of Engineering Infinity
- Concept of Complex Frequency
- Classification of Signals: Energy & Power
- Classification of Systems
- What is a Control System
- Classification of a Control System: Open-loop & Closed-loop
