1.2

Topic 2: The Concept of Engineering Infinity

3

Module 1:

Basics of Signals and Systems

Learning Outcomes

- ▶ Uniqueness of the Exponential Signal
- ▶ Concept of Engineering Infinity
- ▶ Concept of Complex Frequency
- ▶ Classification of Signals: Energy & Power
- ▶ Classification of Systems
- ▶ What is a Control System
- ▶ Classification of a Control System: Open-loop & Closed-loop

1.1 Topic 1: The Importance of the Exponential Function

The Exponential function, written as either e^{ax} or e^{at} depending on whether it is $f(t)$ or $f(x)$, has properties that make it mathematically unique.

1. The derivative (rate of change) of the exponential function is the exponential function itself. More generally, this is a function whose rate of change is proportional to the function itself.

$$\frac{de^{ax}}{dx} = ae^{ax} \quad (1)$$

2. The integral of the exponential function is also the exponential function itself.

$$\int e^{ax} dx = \frac{1}{a}e^{ax} \quad (2)$$

1.2 Topic 2: The Concept of Engineering Infinity
